Quiz: Systems of sentences

Given this system:

- Between the dog, the cat, and the bird, one is red.
- Between the dog and the cat, one is orange.
- The dog is black.

Problem 1:

What color is the bird?

Problem 2:

Is this system singular or non-singular?

Solution: Systems of information

Given this system:

- Between the dog, the cat, and the bird, one is red.
- Between the dog and the cat, one is orange.
- The dog is black.

Solution: Systems of information

Given this system:

- Between the dog, the cat, and the bird, one is red.
- Between the dog and the cat, one is orange.
- The dog is black.

Solution 1:

Solution: Systems of information

Given this system:

- Between the dog, the cat, and the bird, one is red.
- Between the dog and the cat, one is orange.
- The dog is black.

Solution 1:

The bird is red. 

Solution: Systems of information

Given this system:

- Between the dog, the cat, and the bird, one is red.
- Between the dog and the cat, one is orange.
- The dog is black.

Solution 1:

The bird is red. 

Solution: Systems of information

Given this system:

- Between the dog, the cat, and the bird, one is red.
- Between the dog and the cat, one is orange.
- The dog is black.

Solution 1:

The bird is red. 

Solution: Systems of information

Given this system:

- Between the dog, the cat, and the bird, one is red.
- Between the dog and the cat, one is orange.
- The dog is black.

Solution 1:

The bird is red. 

Solution: Systems of information

Given this system:

- Between the dog, the cat, and the bird, one is red.
- Between the dog and the cat, one is orange.
- The dog is black.

Solution 1:

The bird is red. 

Solution: Systems of information

Given this system:

- Between the dog, the cat, and the bird, one is red.
- Between the dog and the cat, one is orange.
- The dog is black.

Solution 1:

The bird is red. 

Solution: Systems of information

Given this system:

- Between the dog, the cat, and the bird, one is red.
- Between the dog and the cat, one is orange.
- The dog is black.

Solution 1:

The bird is red. 

Solution: Systems of information

Given this system:

- Between the dog, the cat, and the bird, one is red.
- Between the dog and the cat, one is orange.
- The dog is black.

Solution 1:

The bird is red. 

Solution: Systems of information

Given this system:

- Between the dog, the cat, and the bird, one is red.
- Between the dog and the cat, one is orange.
- The dog is black.

Solution 1:

The bird is red. 

Solution: Systems of information

Given this system:

- Between the dog, the cat, and the bird, one is red.
- Between the dog and the cat, one is orange.
- The dog is black.

Solution 1:

The bird is red. 

Solution 2:

It is non-singular.

System of Linear Equations

System of equations

Sentences $\rightarrow$ Equations

Sentences

Between the dog and
the cat, one is black.

Sentences $\rightarrow$ Equations

Sentences

Between the dog and
the cat, one is black.

Sentences with numbers

The price of an apple
and a banana is \$10.

Sentences → Equations

Sentences

Between the dog and
the cat, one is black.

Sentences with numbers

The price of an apple
and a banana is \$10.

Equations

$$a + b = 10$$

Quiz: Systems of equations 1

You go two days in a row and collect this information:

- **Day 1:** You bought an apple and a banana and they cost \$10.
- **Day 2:** You bought an apple and two bananas and they cost \$12.

Question: How much does each fruit cost?

Solution: Systems of equations 1

- **Day 1:** You bought an apple and a banana and they cost \$10.
- **Day 2:** You bought an apple and two bananas and they cost \$12.
- **Solution:** An apple costs \$8, a banana costs \$2.

Solution: Systems of equations 1

- **Day 1:** You bought an apple and a banana and they cost \$10.

$$\text{🍏} + \text{🍌} = \$10$$

- **Day 2:** You bought an apple and two bananas and they cost \$12.

- **Solution:** An apple costs \$8, a banana costs \$2.

Solution: Systems of equations 1

- **Day 1:** You bought an apple and a banana and they cost \$10.

$$\text{🍏} + \text{🍌} = \$10$$

- **Day 2:** You bought an apple and two bananas and they cost \$12.

$$\text{🍏} + \text{🍌} + \text{🍌} = \$12$$

- **Solution:** An apple costs \$8, a banana costs \$2.

Solution: Systems of equations 1

- **Day 1:** You bought an apple and a banana and they cost \$10.

$$\text{🍏} + \text{🍌} = \$10$$

- **Day 2:** You bought an apple and two bananas and they cost \$12.

$$\text{🍏} + \text{🍌} + \boxed{\text{🍌}} = \$12$$

- **Solution:** An apple costs \$8, a banana costs \$2.

Solution: Systems of equations 1

- **Day 1:** You bought an apple and a banana and they cost \$10.

$$\text{🍏} + \text{🍌} = \$10$$

- **Day 2:** You bought an apple and two bananas and they cost \$12.

$$\text{🍏} + \text{🍌} + \boxed{\text{🍌}} = \$1\boxed{2}$$

- **Solution:** An apple costs \$8, a banana costs \$2.

Solution: Systems of equations 1

- **Day 1:** You bought an apple and a banana and they cost \$10.

$$\text{🍏} + \text{🍌} = \$10$$

- **Day 2:** You bought an apple and two bananas and they cost \$12.

$$\text{🍏} + \text{🍌} + \boxed{\text{🍌}} = \$12$$

↙
\$2

- **Solution:** An apple costs \$8, a banana costs \$2.

Solution: Systems of equations 1

- **Day 1:** You bought an apple and a banana and they cost \$10.

$$\text{Apple} + \text{Banana} = \$10$$

A blue curved arrow points from the banana icon to the text "\$2" below it.

- **Day 2:** You bought an apple and two bananas and they cost \$12.

$$\text{Apple} + \text{Banana} + \text{Banana} = \$12$$

A blue square box is drawn around the second banana icon. A blue curved arrow points from the bottom of this box to the text "\$2" below it.

- **Solution:** An apple costs \$8, a banana costs \$2.

Solution: Systems of equations 1

- **Day 1:** You bought an apple and a banana and they cost \$10.

Diagram illustrating the addition: An apple is shown above the number 8, and a banana is shown above the number 2. Arrows point from the numbers 8 and 2 to the apple and banana respectively, showing that 8 + 2 = 10.

- **Day 2:** You bought an apple and two bananas and they cost \$12.

Diagram illustrating the addition of fruit prices:

- 1 apple + 1 banana + 1 banana = \$2
- The second banana and the result '\$2' are highlighted with blue boxes and an arrow, indicating the total cost for the second banana.

- **Solution:** An apple costs \$8, a banana costs \$2.

Quiz: Systems of equations 2

You go two days in a row and collect this information:

- **Day 1:** You bought an apple and a banana and they cost \$10.
- **Day 2:** You bought two apples and two bananas and they cost \$20.

Question: How much does each fruit cost?

Solution: Systems of equations 2

- **Day 1:** You bought an apple and a banana and they cost \$10.
- **Day 2:** You bought two apples and two bananas and they cost \$20.

Solution: Systems of equations 2

- **Day 1:** You bought an apple and a banana and they cost \$10.

$$\text{🍏} + \text{🍌} = \$10$$

- **Day 2:** You bought two apples and two bananas and they cost \$20.

Solution: Systems of equations 2

- **Day 1:** You bought an apple and a banana and they cost \$10.

$$\text{🍏} + \text{🍌} = \$10$$

- **Day 2:** You bought two apples and two bananas and they cost \$20.

$$\text{🍏🍏} + \text{🍌🍌} = \$20$$

Solution: Systems of equations 2

- **Day 1:** You bought an apple and a banana and they cost \$10.

$$\text{apple} + \text{banana} = \$10$$

- **Day 2:** You bought two apples and two bananas and they cost \$20.

$$2\text{ apples} + 2\text{ bananas} = \$20$$

Same thing!!!

Solution: Systems of equations 2

- **Day 1:** You bought an apple and a banana and they cost \$10.

$$\text{apple} + \text{banana} = \$10$$

- **Day 2:** You bought two apples and two bananas and they cost \$20.

$$2 \text{ apples} + 2 \text{ bananas} = \$20$$

Same thing!!!

Solution: Systems of equations 2

- **Day 1:** You bought an apple and a banana and they cost \$10.

$$\text{apple} + \text{banana} = \$10$$

- **Day 2:** You bought two apples and two bananas and they cost \$20.

$$2 \times \text{apple} + 2 \times \text{banana} = \$20$$

Same thing!!!

8 2

5 5

Solution: Systems of equations 2

- **Day 1:** You bought an apple and a banana and they cost \$10.

$$\text{apple} + \text{banana} = \$10$$

- **Day 2:** You bought two apples and two bananas and they cost \$20.

$$2 \times \text{apple} + 2 \times \text{banana} = \$20$$

Same thing!!!

8 2

5 5

8.3 1.7

Solution: Systems of equations 2

- **Day 1:** You bought an apple and a banana and they cost \$10.

$$\text{apple} + \text{banana} = \$10$$

- **Day 2:** You bought two apples and two bananas and they cost \$20.

$$2 \times \text{apple} + 2 \times \text{banana} = \$20$$

Same thing!!!

8	2
5	5
8.3	1.7
0	10

Solution: Systems of equations 2

- **Day 1:** You bought an apple and a banana and they cost \$10.

 +  = \$10

- **Day 2:** You bought two apples and two bananas and they cost \$20.

 +  = \$20

Same thing!!!

8 2

5 5

8.3 1.7

0 10

Infinitely many solutions!

Quiz: Systems of equations 3

You go two days in a row and collect this information:

- **Day 1:** You bought an apple and a banana and they cost \$10.
- **Day 2:** You bought two apples and two bananas and they cost \$24.

Question: How much does each fruit cost?

Solution: Systems of equations 3

- **Day 1:** You bought an apple and a banana and they cost \$10.
- **Day 2:** You bought two apples and two bananas and they cost \$24.

Solution: Systems of equations 3

- **Day 1:** You bought an apple and a banana and they cost \$10.

$$\text{🍏} + \text{🍌} = \$10$$

- **Day 2:** You bought two apples and two bananas and they cost \$24.

Solution: Systems of equations 3

- **Day 1:** You bought an apple and a banana and they cost \$10.

$$\text{🍏} + \text{🍌} = \$10 \quad \Rightarrow \quad \text{🍏🍏} + \text{🍌🍌} = \$20$$

- **Day 2:** You bought two apples and two bananas and they cost \$24.

Solution: Systems of equations 3

- **Day 1:** You bought an apple and a banana and they cost \$10.

$$\text{🍏} + \text{🍌} = \$10 \quad \Rightarrow \quad \text{🍏🍏} + \text{🍌🍌} = \$20$$

- **Day 2:** You bought two apples and two bananas and they cost \$24.

$$\text{🍏🍏} + \text{🍌🍌} = \$24$$

Solution: Systems of equations 3

- **Day 1:** You bought an apple and a banana and they cost \$10.

$$\text{🍏} + \text{🍌} = \$10 \quad \Rightarrow \quad \text{🍏🍏} + \text{🍌🍌} = \$20$$

- **Day 2:** You bought two apples and two bananas and they cost \$24.

$$\text{🍏🍏} + \text{🍌🍌} = \$24$$

Contradiction!

Solution: Systems of equations 3

- **Day 1:** You bought an apple and a banana and they cost \$10.

$$\text{🍏} + \text{🍌} = \$10 \quad \Rightarrow \quad \text{🍏🍏} + \text{🍌🍌} = \$20$$

- **Day 2:** You bought two apples and two bananas and they cost \$24.

$$\text{🍏🍏} + \text{🍌🍌} = \$24$$

Contradiction!

No solutions!

Quiz

Problem 1

Which of the following plots corresponds to the system of equations:

- $3a + 2b = 8$
- $2a - b = 3$

Problem 2

Is this system singular or non-singular?

Solution

Problem 1

 b

a)

Problem 2

Since the lines cross at a unique point, the system is non-singular.

Solution

Problem 1

Problem 2

Since the lines cross at a unique point, the system is non-singular.

Solution

Problem 1

a)

Problem 2

Since the lines cross at a unique point, the system is non-singular.

Solution

Problem 1

Problem 2

Since the lines cross at a unique point, the system is non-singular.

Solution

Problem 1

a)

Problem 2

Since the lines cross at a unique point, the system is non-singular.

Solution

Problem 1

 b

a)

Problem 2

Since the lines cross at a unique point, the system is non-singular.

Solution

Problem 1

 b

a)

Problem 2

Since the lines cross at a unique point, the system is non-singular.

Solution

Problem 1

 b

a)

Problem 2

Since the lines cross at a unique point, the system is non-singular.

DeepLearning.AI

System of Linear Equations

**Linear dependence and
independence (3x3)**

Linear dependence and independence

$$a = 1$$

$$b = 2$$

$$a + b = 3$$

Linear dependence and independence

$$\begin{aligned} a &= 1 \\ b &= 2 \\ a + b &= 3 \end{aligned} \qquad a + 0b + 0c = 1$$

Linear dependence and independence

The diagram illustrates the substitution of values for variables a and b into two linear equations. On the left, the values are defined as $a = 1$, $b = 2$, and $a + b = 3$. On the right, the equations are $a + 0b + 0c = 1$ and $0a + b + 0c = 2$. Blue curved arrows point from the value 1 in the first equation to the coefficient of a in the second equation, and from the value 2 in the second equation to the coefficient of b in the first equation, demonstrating how the values are substituted into the equations.

$$\begin{array}{l} a = 1 \\ b = 2 \\ a + b = 3 \end{array} \quad \begin{array}{l} a + 0b + 0c = 1 \\ 0a + b + 0c = 2 \end{array}$$

Linear dependence and independence

The diagram illustrates the relationship between variable assignments and a linear equation. On the left, three equations are listed: $a = 1$, $b = 2$, and $a + b = 3$. The numbers 1, 2, and 3 are highlighted in teal. On the right, two equations are shown: $a + 0b + 0c = 1$ and $0a + b + 0c = 2$. The numbers 1 and 2 are also highlighted in teal. A blue curved arrow points from the teal '1' in $a = 1$ to the teal '1' in $a + 0b + 0c = 1$. Another blue curved arrow points from the teal '2' in $b = 2$ to the teal '2' in $0a + b + 0c = 2$. A plus sign is placed between the two equations on the right, and a horizontal line is drawn underneath them.

$$\begin{array}{l} a = 1 \\ b = 2 \\ a + b = 3 \end{array} \quad \begin{array}{l} \xrightarrow{\quad} a + 0b + 0c = 1 \\ \xrightarrow{\quad} 0a + b + 0c = 2 \\ + \\ \hline \end{array}$$

Linear dependence and independence

$$\begin{array}{rcl} a = 1 & \xrightarrow{\quad} & a + 0b + 0c = 1 \\ b = 2 & \xrightarrow{\quad} & 0a + b + 0c = 2 \\ a + b = 3 & & \hline & & a + b + 0c = 3 \end{array}$$

Linear dependence and independence

The diagram illustrates the process of substituting values for variables a and b into a linear equation. On the left, three equations are listed: $a = 1$, $b = 2$, and $a + b = 3$. On the right, two equations are shown: $a + 0b + 0c = 1$ and $0a + b + 0c = 2$. These two equations are added together, as indicated by a plus sign and a horizontal line. The result of the addition is $a + b + 0c = 3$. Blue curved arrows show the mapping from the left equations to the right equations: from $a = 1$ to the first equation, from $b = 2$ to the second equation, and from $a + b = 3$ to the final result.

$$\begin{array}{rcl} a = 1 & \rightarrow & a + 0b + 0c = 1 \\ b = 2 & \rightarrow & 0a + b + 0c = 2 \\ a + b = 3 & \rightarrow & \hline a + b + 0c = 3 \end{array}$$

Linear dependence and independence

Diagram illustrating the derivation of a third equation from two others:

$$\begin{array}{rcl} a = 1 & \xrightarrow{\quad} & a + 0b + 0c = 1 \\ b = 2 & \xrightarrow{\quad} & 0a + b + 0c = 2 \\ a + b = 3 & \xrightarrow{\quad} & a + b + 0c = 3 \end{array}$$

The third equation is derived by adding the first two equations, as indicated by the '+' sign and the blue arrows.
